Using ASP (WEB 430)
ASP is Microsoft's approach to building active pages. This course covers the framework-underlying ASP, creating ASP pages, the elements of an ASP and ASP.NET. Practical applications of ASP will be used including forms and database access. Students will build a web site using ASP and .NET technology.
1 section currently offered. Click here for more information

Web Site Design (WEBD 215)
This course takes a balanced perspective of web analysis and design, giving attention to both technology and aesthetic considerations. Making use of a site analysis process, students will conduct a feasibility study and a detailed needs analysis, which will culminate in site design proposals. Factors in selecting technologies to meet web standards, interactivity, multimedia and data-driven site designs will also be reviewed.
